		;	

2. Citations and explanations

The inventions described in claims 1, 2, 11-14 appear to involve an inventive step over the documents cited in the ISR.

None of the documents cited in the ISR discloses "surrounding an inner side surface on which a pair of pistons face each other and an inner peripheral side of a cylinder, to constitute a pressure detection chamber" and "forming a pressure detective pore on a cylinder that allows a pressure detection chamber to communicate with the outside"; nor are these points obvious to a person skilled in the art.
